

Actores y modelos de gobernanza en las Smart cities

2016

text (article)

Analítica

Governance actors and models promoting Smart cities are analyzed in this paper. The concepts of sustainability, efficiency, and participation are the the core of smart city paradigm. To configure Smart city, new tools of government are introduced, such as the public-private parteneship that promotes cooperation among local administrations and the energetic and technological sector. Are this kind of tools going to transform the model of urban governance? Is the Smart city an opportunity for public participation or, in the contrary, the occasion for private interests to influence urban policy? The case of Barcelona 2011-2015 is a good example for exploring the transformation that this model of urban governance could promote
