

Administración basada en la evidencia (ABE): Bases y aplicación en la resolución de problemas. Una revisión metodológica y presentación de las conclusiones de la investigación [

2012

text (article)

Analítica

The theory of business management and its researches are guidelines for resolving problems in the organizations. It is not a learning source when a member finds an unknown problem. As on many other occasions, corporate management has to go to other scientific disciplines for support to deal with new issues as they arise. In the field of problem solving and conceptual assimilations have occurred in other fields of knowledge such as mathematics, psychology, engineering, etc. But the best proof that we can find a solution to the question based on scientific research is in medical practice. To find the solution normally we can appeal against to your intuition or to others opinion, developing corrective actions, mostly new, whose results lead to new knowledge (Argyris y Schön, 1978). This behavior does not allow making the most of the generated knowledge. Years ago, a philosophy that serves as the scientific basis for clinical decisions is being developed in the medical field British, Canadian and American (although in an incipient worldwide way) for clinical decisions. The Evidence Based Medicine. In this work the bases lay to integrate that philosophy in business management, making it operational and paying particular attention to their application in resolving problems, it is called Evidence-Based Management.
