

Aglomeración, aprendizaje colectivo y transmisión de conocimiento: revisión de la literatura [

2007

text (article)

Analítica

It exists an extensive literature which puts its attention in the spillovers of knowledge like external determinants of the capacity of innovation of the companies. These spillovers are associate to the positive externalities that are received from the surroundings in the matter of knowledge, which could be technological (effects of propagation of the knowledge available for everybody) or pecuniary (associates to the concentration of the knowledge in determined networks, in which they take part workers, suppliers, specialized infrastructures and institutions). As much the industrial economists as the regional ones emphasize the importance of these spills. Nevertheless, important differences between these two groups exist; while for first, the mere expensive contact to take explains the transference of knowledge at local level; for the regional economists the socialized processes of creation of he himself are key.
