

Alternativa de tratamiento para tierras fuller contaminadas con aceite dielectrico. [

Universidad Tecnológica de Pereira,
2006

text (article)

Analítica

At the moment one of the important environmental problems is the alteration of terrestrial ecosystems by contamination with hydrocarbons derived from petroleum. In Colombia, electrical industry uses dielectric oil like insulating system in the transforming of distribution and power, which must be put under maintenance periodically, generating remainders oily, like the fuller earth and the Kraft paper. In order to give solution this problematic one, a procedure that combines the washing to earth fuller with water and detergent to 70C, followed with a process of landfarming, obtaining total petroleum hydrocarbon diminution (TPH) superior to 73%
