

Análisis de normas para la gestión sostenible en edificación [

2019

text (article)

Analítica

Systems quality management, environmental and occupational risk prevention have proved useful for performance improvement in organizations. Adopting standards for the management of buildings in their different stages can be one of the strategies to be carried out as part of the continuous improvement. Throughout the lifecycle of a building multiple processes interrelate develop. In the use stage it is crucial to achieve a good organization of maintenance and conservation processes to improve their life cycle. This article describes the content of the rules previously selected with the aim of finding a common structure as a basis for the development of a comprehensive model at the stage of use of any type of building analyzed
