

Análise espacial do desemprego nos mercados locais de traballo españois [

2017

text (article)

Analítica

Regional differences are important. They reveal that the level of territorial disaggregation needs to adopt a greater role in the study of the labor market. In order to gain insight into territorial differences, this essay suggests a model to locate unemployment, so as to provide disaggregate information based on the division of the geographical space. The analysis of the spatial distribution of unemployment allows for the description of the labor market, acting as a tool to design public policies
