

Aportes de la Economía Feminista para el análisis del capitalismo contemporáneo [

2016

text (article)

Analítica

For decades, feminist economists have shown that differentiations and hierarchies between men and women are central to the organization of capitalist societies. In this article, we review the renewed forms and relevance of feminist analyses in the context of contemporary capitalism's particular features and mechanisms, highlighting three principal contributions of their insights. First, given their demonstration of the invisibility of reproductive and emotional work, feminist economics perspectives help us to understand the growing importance of cognitive and relational forms of work, which are increasingly important in relation to the formal productive sector. Transformations in labor underlie the redistribution of risk in the post-Fordism economies, which leads us to the second fundamental contribution of feminist economic studies. These studies shed light on the material and subjective experiences of precarious populations, whose economic insecurity reflects the unequal distribution of risk that is characteristic with the neo-liberalization and financializing of the economy. Finally, we see how these dynamics contribute to new forms of production and transfer of value, emphasizing feminist studies of inequalities experienced in the externalized and expropriated sites of accumulation of capital
