

Astronomia nos anos iniciais do Ensino Fundamental: uma parceria entre universidade e escola [

2016

text (article)

Analítica

This paper describes the interaction and partnership experience between a school and one of the Federal University of São Carlos (UFSCar) campi, both located in Araras, SP, aiming to teach and promote astronomy and astronautics knowledge among students of the first five years of Elementary Education. This initiative made use of Brazilian Olympiad of Astronomy and Astronautics as a motivating event for the theme exploration. The actions were divided into two fronts: an improvement course for the school teachers conducted by university professors and lectures for students by UFSCar students under the guidance of university teachers and the school coordinators. By the observed results, we noticed the importance of narrowing the distance school-university, promoting learning for both institutions and helping to raise the level of education from elementary school to college
