

Bayesian structural equation modeling /

Depaoli, Sarah

The Guilford Press,
2021

Monografía

This book is meant as a guide for implementing Bayesian methods for latent variable models. I have included thorough examples in each chapter, highlighting problems that can arise during estimation, potential solutions, and guides for how to write up findings for a journal article. This book is structured into 12 main chapters, beginning with introductory chapters comprising Part I. Part II is comprised of Chapters 3-5. Each of these chapters deals with various models and techniques related to measurement models within SEM. Part III contains Chapters 6-7, on extending the structural model. Part IV contains Chapters 8-10, on longitudinal and mixture models. Finally, Part IV contains chapters that discuss special topics"

Título: Bayesian structural equation modeling Sarah Depaoli

Editorial: New York, NY The Guilford Press 2021

Descripción física: xxvi, 520 s.

Mención de serie: Methodology in the social sciences

Bibliografía: Includes bibliographical references and index

ISBN: 9781462547746 (cloth) 1462547745

Materia: Bayesian statistical decision theory Social sciences- Statistical methods Théorie de la décision bayésienne Sciences sociales- Méthodes statistiques Bayesian statistical decision theory. Social sciences- Statistical methods.

Punto acceso adicional serie-Título: Methodology in the social sciences
