

## Abordaje del uso inapropiado de antibióticos en la práctica clínica: estrategias y recomendaciones actuales [

2023

text (article)

Analítica

Antibiotics have saved millions of lives around the world, yet today the world is experiencing unprecedented rates of resistance to some of the most common treatments. In this regard, it is vital that efforts are intensified to preserve these gains, reduce the impact of resistance, and ensure continued prevention and treatment of infectious diseases. Consequently, this review aims to capture the main strategies or recommendations for the inappropriate use of antibiotics, especially in clinical practice. The research was developed using a bibliographic documentary type methodology under the review modality. Among the main strategies or recommendations to avoid this inappropriate use are, from general to specific, the Global Action Plan on antimicrobial resistance, agreed by the WHO World Health Assembly in May 2015. Likewise, from this plan, in each partner country, national action plans have been established. In this global and national framework, Antibiotic Use Optimization Programs arise, to be established in hospitals, clinics and primary care. It is important to highlight that all these actions are new and many are in the implementation stage, therefore, there is still a long way to go, therefore the need for not only generating guidelines for the treatment of various infectious pathologies is evident. , but even more, to make such guides comply. Likewise, it is necessary that these plans and programs for the supervision and control of the use of antibiotics are sustainable over time and globally
