

## Abordaje integral del dolor coital: tratamiento en un caso de dispareunia [

2014

text (article)

Analítica

This is a descriptive study: the presentation of a clinical case of dyspareunia. The main aim of this research is to visualize a frequent and not very well-known problem that has a big impact on the quality of life of the women who suffer it. As a secondary objective, a novel and practical treatment, which avoids simplistic and only organic classifications, is proposed. The conclusion is that in these cases an individualized treatment, respecting the timing of the patient, and taking into account the complex emotional, cultural, psychological and relational factors, broadening the classical approach to this pathology, is beneficial
