Analítica

In spite that there are laws of motion that regulate the functioning of the capitalist system, the specific particularity that each country faces could only be understood if we relate it to a specific historical context. Argentina is a country that has experienced enormous economic transformations in recent years, and went from being the main example of how to perform a successful economic transformation, to face in 2001 its worst economic and social crisis. In this context, the paper would like to analyze two elements that are crucial to the economic performance of the country. Firstly, we will study the accumulation pattern of the country for the period 1976-2006, as well as the economic policies applied in order to build and sustain it. Secondly, once we have identified the ruptures and continuities of the accumulation pattern, we will analyze the way in which the economic surplus has been distributed between social classes, putting special attention on the functional income distribution as a main determinant of the accumulation pattern.
