

Administración pública en el metaverso: Notas para el debate del futuro [

2023

text (article)

Analítica

During the last decades, States have undergone a series of profound transformations. They have modified the old idea of Weberian bureaucracy to mutate into intelligent states based on the incorporation of technologies, robotization, artificial intelligence and endless advances that have made it possible to digitize processes, promote new forms of social interrelationships, open data policies and social participation. In this dynamic and constantly changing world, the State as we know it today is but a snapshot of the past. The future, the advance of new technologies and the advent of immersive worlds invite (and even force) States to rethink and put their current morphology in check. Today the State must contemplate these new realities, meet the demands of the digital native generations and incorporate, in an immersive world, the next stage of humanity in terms of development and innovation

During the last decades, States have undergone a series of profound transformations. They have modified the old idea of Weberian bureaucracy to mutate into intelligent states based on the incorporation of technologies, robotization, artificial intelligence and endless advances that have made it possible to digitize processes, promote new forms of social interrelationships, open data policies and social participation. In this dynamic and constantly changing world, the State as we know it today is but a snapshot of the past. The future, the advance of new technologies and the advent of immersive worlds invite (and even force) States to rethink and put their current morphology in check. Today the State must contemplate these new realities, meet the demands of the digital native generations and incorporate, in an immersive world, the next stage of humanity in terms of development and innovation
