Analítica

Objective: to describe the experience of carrying out extension actions in neurological rehabilitation, prevention of comorbidities and guidance to the patient and caregiver/family member, during the COVID-19 pandemic. Methods: experience report of the extension project from April 2020 to September 2021, with the participation of patients treated at SUS, through the CISONORPI/UENP agreement, covering 22 neighboring municipalities of Jacarezinho-PR and approximately 14 students and 4 professors of the physiotherapy at UENP. Results: 145 publications on Fisiolar's social networks, 349 followers on Instagram and 451 likes on Facebook. In addition, 18 patients were assisted in telemarketing, totaling 35 booklets and 20 online sessions (2 to 3 sessions per patient) and 4 patients in person. Conclusion: Assistance to neurological patients at the UENP Physiotherapy clinic, through teleservice, social networks and face-to-face care, maintaining the general clinical picture, and enabling the training of students in the performance of Neurofunctional Physiotherapy online and in person
