

# Ciclones tropicales que alcanzaron a Venezuela y México (siglo XX): Propuesta de estudio comparado [

2023

text (article)

Analítica

This work aims to draw attention to the relevance of comparative methodologies for the study of phenomena with a long territorial scope, whose affectation produces adversities in geographically distant and contextually different countries. To this end, we have relied on the case of hurricanes, whose displacement over the Gulf-Caribbean region can affect countries as far apart as Venezuela and Mexico. The documented reconstruction of disastrous events in this regard, makes it possible to demonstrate the characteristics of the problem, as well as the need to develop this type of methodology, essentially based on historical research
