

El impacto del proyecto minero Fruta del Norte de la empresa Lundin Gold: Una visión sociolaboral de la zona de influencia. Periodo 2020-2021 [

2022

text (article)

Analítica

Large investment projects imply a social impact that must be treated very rigorously, since they influence the way of life of the social conglomerates where the economic initiatives are planned. According to this situation, in the mining field, social and economic phenomena are produced, which directly and indirectly affect the daily development of the communities in the zone of influence of the Fruta del Norte project; that is, the localities that make up the Yantzaza canton. Employment is one of the most important issues of interest to the sectors involved. The impact of the company's extractive activity, in the same way that it has generated favorable reactions, has also produced resistance in others. In the present work, a quantitative methodology is applied with which the hypotheses are studied and the details of this socio-labor dilemma that is causing a wide debate are obtained. It is concluded that large-scale mining is an imperative source of development, where state legislation, in affinity with the cooperation of the community and the socioeconomic responsibility of the company, would favor a fair and permanent growth of the areas of influence
