

## Multivariate tests for time series models [

Cromwell, Jeff B.  
Hannan, Michael Joseph.  
Labys, Walter C. (1937-)  
Terraza, Michel.

Sage,  
cop. 1995.

Monografía

Review: The authors start out with stationarity testing, remarking that, as compared to univariate applications, multivariate applications are few. They develop the "joint stationarity" test [...]. In chapter 3, they turn to testing for "cointegration". When two nonstationary time series variables combine to generate a stationary error process in a regression, they are held to be "cointegrated". If such were found to be the case in the above example of GNP and Federal Spending, then the inference of a significant link between the two might not be spurious after all. The authors describe various cointegration tests, the most straightforward of which utilizes the well-known Durbin-Watson statistic.[...] The final chapter gives helpful guidance on computer software. **Título:** Multivariate tests for time series models Texto impreso] Jeff B. Cromwell, Michael J. Hannan, Walter C. Labys, Michel Terraza.

**Editorial:** Thousand Oaks (California) London New Delhi Sage cop. 1995.

**Descripción física:** VI, 98 p. gráf. bl. y n. 22 cm

**Mención de serie:** Sage university papers. Quantitative applications in the social sciences 07-100

**Bibliografía:** Bibliografía: p. 91-96.

**Contenido:** [Chap.] 1-8: Introduction ; Testing for joint stationarity, normality, and independence ; Testing for cointegration ; Testing for causality ; Multivariate linear model specification ; Multivariate nonlinear models ; Model order and forecast accuracy ; Computational methods for performing the tests -- Appendix: Statistical tables

**Procedencia:** Donación Arthur J. Kendall.

**ISBN:** 0-8039-5440-9

**Materia:** Análisis multivariante Series temporales Ciencias sociales- Investigación Ciencias sociales- Métodos estadísticos

**Autores:** Cromwell, Jeff B. Hannan, Michael Joseph. Labys, Walter C. ( 1937-) Terraza, Michel.
