Essays. Essays.

Monografía

"This collected volume showcases cutting-edge research in the rapidly developing area of sign language corpus linguistics in various sign language contexts across the globe. Each chapter provides a detailed account of particular national corpora and methodological considerations in their construction. Part 1 focuses on corpus-based linguistic findings, covering aspects of morphology, syntax, multilingualism, and regional and diachronic variation. Part 2 explores innovating solutions to challenges in building and annotating sign language corpora, touching on the construction of comparable sign language corpora, collaboration challenges at national level, phonological arrangement of digital lexicons, and (semi-)automatic annotation. This unique volume documenting the growth in breadth and depth within the discipline of sign language corpus linguistics is a key resource for researchers, teachers and postgraduate students in the field of sign language linguistics, and will also provide valuable insights for other researchers interested in corpus linguistics, construction grammar, and gesture studies"--
