

# **Análisis de medidas de regulación del GAD de Portoviejo ante desastres sísmicos luego del terremoto del 16-A [**

2023

text (article)

Analítica

This study analyzed the regulatory measures implemented by the Decentralized Autonomous Government, GAD, of Portoviejo after the earthquake that occurred in April 2016. A descriptive and exploratory approach was used, which included the review of regulatory documents and the collection of information from secondary sources. In addition, GAD staff collaborated to obtain additional data. The results obtained show a clear vision of the degree of compliance with the established norms and regulations. Relevant aspects such as urban planning, infrastructure construction, landslide and tsunami prevention measures, early warning systems, response protocols and public education strategies were analyzed. Coordination between the entities involved in these measures was also evaluated. The findings of this study are expected to be relevant both for the Portoviejo GAD and for other entities responsible for disaster management, since they provide a solid basis for making informed decisions and identifying areas for improvement in preparedness and response to future seismic disasters
