

"Desde mayo a San Miguel, pastor de ovejas quiero ser": el análisis estructural del sistema agropecuario de Gérgal [

2024

text (article)

Analítica

This article deals with the presence of transhumant livestock in the southeastern area of the Sierra de Los Filabres. The analysis carried out in 2023 on a large complex of stone structures located in the town of Gérgal (Almería) is shown, which until now had no previous studies. The application of a methodology based on Landscape Archeology and Architectural Archeology, together with the use of information and communication technologies through a Geographic Information System (GIS), have allowed us to obtain novel data about the magnitude and nature of these historical structures, and interpret them as part of a transhumant livestock production system. This in turn has allowed us to understand in greater depth the importance of livestock farming in the study area, confirming the existence of a large-scale transhumant model during modern times
