

Legalización del porte o tenencia de armas de fuego en población civil, implicaciones jurídicas, psicológicas y sociológicas [

2023

text (article)

Analítica

The issue of legalizing the carrying or possession of firearms in the civilian population is an issue that has generated controversy in society. From a legal point of view, there are arguments both for and against legalization, considering aspects such as the right to self-defense, citizen security, control of illegal arms trafficking, and the risk of accidents or misuse. From a psychological perspective, the availability of firearms in homes or communities can increase the risk of injury and death from domestic violence, suicide, homicide, and accidents. Additionally, studies suggest that firearm owners may be more prone to mental health problems such as post-traumatic stress disorder, mood disorders, and substance abuse. From a sociological perspective, legalizing the carrying or possession of firearms may have implications for the perception of security, social dynamics, violence, and crime. In some countries, legalization has been linked to an increase in the number of homicides and in armed violence. The legalization of the carrying or possession of firearms in the civilian population is a complex and multidimensional issue that requires a holistic approach, considering its legal, psychological and sociological recommendations. It is essential to promote informed debate and research in order to make fundamental decisions on this issue
