Monografía

Annotation "This book results from a group meeting held at the Institute for Scientific Exchange in Torino, Italy. The central aim was for scientists to "think together" in new ways with those in the humanities inspired by quantum theory and especially quantum brain theory. These fields of inquiry have suffered conceptual estrangement but now are ripe for rapprochement, if academic parochialism is put aside." "A prevalent theme of book is a moving away from individual elements and individual actors acting upon each other, toward a coordinate hermeneutic dynamics that manifests as a coherent totality. Among the topics covered are image in photography and in neuroscience; language; time; brain and mathematics; quantum brain dynamics and quantum communication."--BOOK JACKET.
