Monografía

Shortening times to market of complex products on the one hand and the need for faster and more efficient creation and evolution of highly specialized enterprises on the other hand motivate the need for Instant Virtual Enterprises. These rely on contemporary software technology for their formation, coordination, evolution, and ultimately, disbandment. This book fuses practical needs with theoretical input to present important research innovations in supporting Instant Virtual Enterprises (IVEs). We show how a business opportunity in the manufacturing domain can be analyzed to form an IVE in a.
