

A web site for the Air Force : telecommunications engineering /

Conde Gil, Enrique

[s.n.],
2009

Monografía

The main goal of this final degree thesis is to develop a PHP web site using the CMS Joomla to edit the information and create the site. The topic is the Air force. In this case I have chosen the Spanish Air Force, but the design and the global web page can be adaptable to any other country Air Force just changing the content. Several steps were made in order to achieve the final goal. Firstly, fixing the goals that the web page should achieve was done, as well as the decision of using Joomla was taken, what involved to learn the way Joomla works. Secondly, information research was done in order to create the content of the web page, and the way to implement them taking into account the Joomla possibilities was carried out. Lastly, to develop each of the web site parts it is divided in was done. In spite of the simple idea, this was the longest part because it implicates making so me research of the components available to implement the content in different ways, as well as trying several components before find the one that best suits to the web site needs
