

Emergent Web Intelligence: Advanced Information Retrieval [

Chbeir, Richard

Springer London,
2010

Monografía

World Wide Web (WWW) provides interlinked hypertext documents (Web pages) that may contain text, images, videos, and other multimedia. WWW is growing at a remarkable rate and finding appropriate information can therefore be challenging. Web information retrieval deals with the search for documents, for information within documents and for metadata about documents, as well as that of searching databases in the WWW. Web information retrieval is an interdisciplinary science and deals with this challenge by exploiting various information technologies and computational intelligence approaches to design the next generation of web-information retrieval technologies. This Volume provides reviews of cutting-edge technologies and insights into various topics related to XML-based and multimedia information access and retrieval under the umbrella of Web Intelligence; it also illustrates how organizations can gain competitive advantages by applying new techniques in real-world scenarios. The 18 chapters are arranged in three parts and have identified several important problem formulations in the area of Web and multimedia information querying, modelling user interactions and advanced information security and access control models. Chapters are authored by reputed scientists in the field and all articles are self-contained to provide the greatest reading flexibility

Título: Emergent Web Intelligence: Advanced Information Retrieval [Recurso electrónico] edited by Richard Chbeir, Youakim Badr, Ajith Abraham, Aboul-Ella Hassanien

Editorial: London Springer London 2010

Descripción física: XIX, 487p. digital

Mención de serie: Advanced Information and Knowledge Processing 1610-3947

Documento fuente: Springer eBooks

Contenido: Contextual and Conceptual Information Retrieval and Navigation on the Web -- Automatic Invocation Linking for Collaborative Web-Based Corpora -- WS-Query (QA(B(3C (BA Framework to Efficiently Query Semantic Web Service -- RDF-GL -- Semantics-based Intelligent Indexing and Retrieval of Digital Images (QA(B(3C (BA Case Study -- Harvesting Intelligence in Multimedia Social Tagging Systems -- User Profiles Modeling in Information Retrieval Systems -- Human-Web Interactions -- Web Recommender Agents with Inductive Learning

Capabilities -- Capturing the Semantics of User interaction -- Analysis of Usage Patterns in Large Multimedia Websites -- An Adaptation Framework for Web Multimedia Presentations -- A Multifactor Secure Authentication System For Wireless Payment -- A Lightweight Authentication Protocol for Web Applications in Mobile Environments -- Developing Access Control Model of Web OLAP over Trusted and Collaborative Data Warehouses -- Security in distributed collaborative environments -- A Low-cost and secure solution for e-commerce -- Hyperchaotic Encryption for Secure E-Mail Communication

ISBN: 9781849960748 978-1-84996-074-8

Materia: Computer science Information storage and retrieval systems Information systems Multimedia systems Electronic data processing Computer Science Information Storage and Retrieval Information Systems Applications (incl.Internet) Multimedia Information Systems Computing Methodologies User Interfaces and Human Computer Interaction Computer Applications

Autores: Badr, Youakim Abraham, Ajith Hassanien, Aboul-Ella

Entidades: SpringerLink (Online service)

Enlace a formato físico adicional: Printed edition 9781849960731

Punto acceso adicional serie-Título: Advanced Information and Knowledge Processing 1610-3947
