

Global analysis : differential forms in analysis, geometry and physics /

Agricola, Ilka

American Mathematical Society,
2001

Monografía

This book introduces the reader to the world of differential forms and their uses in geometry, analysis, and mathematical physics. It begins with a few basic topics, partly as review, then moves on to vector analysis on manifolds and the study of curves and surfaces in 3-space. Lie groups and homogeneous spaces are discussed, providing the appropriate framework for introducing symmetry in both mathematical and physical contexts. The final third of the book applies the mathematical ideas to important areas of physics: Hamiltonian mechanics, statistical mechanics, and electrodynamics

Título: Global analysis differential forms in analysis, geometry and physics Ilka Agricola, Thomas Friedrich ; translated by Andreas Nestke

Editorial: Providence, Rhode Island American Mathematical Society 2001

Descripción física: XIII, 343 p. 26 cm

Mención de serie: Graduate studies in mathematics 52

Nota general: Índice

Bibliografía: Bibliografía: p. 333-335

ISBN: 0-8218-2951-3

Materia: Formas diferenciales Física matemática

Autores: Friedrich, Thomas
