

## High-Level Modeling and Synthesis of Analog Integrated Systems [

Martens, Ewout S. J.

Springer Netherlands,  
2008

Monografía

Various approaches for finding optimal values for the parameters of analog cells, like op amps, have been investigated since the mid-1980s, and they have made their entrance in commercial applications. However, a larger impact on the performance is expected if tools are developed which operate on a higher abstraction level and consider multiple architectural choices to realize a particular functionality. High-Level Modeling and Synthesis of Analog Integrated Systems examines the opportunities, conditions, problems, solutions and systematic methodologies for this new generation of analog CAD tools. A new design paradigm is defined for high-level synthesis of AMS systems: the high-level design flow based on generic behavior. This design approach involves a modeling strategy using generic behavioral models and a synthesis strategy leading to the exploration of a heterogeneous design space containing different architectures. In High-Level Modeling and Synthesis of Analog Integrated Systems, two novel generic behavioral models are described. The first one adopts a time-domain approach and is suited for classes like Delta-Sigma modulators and sampled-data systems. For the second model, a new frequency-domain framework has been developed (the Phase- Frequency Transfer model) which allows the representation of classes of RF systems like front-ends of wireless receivers. To complete the high-level design strategy, the synthesis strategy has been concretized with a new top-down heterogeneous optimization algorithm. The general high-level design methodology for AMS systems and its concrete applications developed in this book serve as a fundamental framework for a new generation of analog CAD tools. By providing support for automated design space exploration at the architectural level, they realize an increase in design productivity

**Título:** High-Level Modeling and Synthesis of Analog Integrated Systems [Recurso electrónico-En línea] by Ewout S. J. Martens, Georges G. E. Gielen

**Editorial:** Dordrecht Springer Netherlands 2008

**Descripción física:** digital

**Tipo Audiovisual:** Engineering Computer science Electronics Systems engineering Engineering Circuits and Systems Processor Architectures Electronics and Microelectronics, Instrumentation

**Mención de serie:** Analog Circuits and Signal Processing Series

**Documento fuente:** Springer eBooks

**Nota general:** Engineering (Springer-11647)

**Restricciones de acceso:** Accesible sólo para usuarios de la UPV

**Tipo recurso electrónico:** Recurso a texto completo

**Detalles del sistema:** Forma de acceso: Web

**ISBN:** 9781402068027 978-1-4020-6802-7

**Autores:** Gielen, Georges G. E.

**Entidades:** SpringerLink (Servicio en línea)

**Enlace a formato físico adicional:** Printed edition 9781402068010

**Punto acceso adicional serie-Título:** Analog Circuits and Signal Processing Series
